Education

- **Master of Computer Application** [Chandigarh University](#) **Punjab, IN** 2023-2025
Relevant Courses: Python, Data Structures, Machine Learning, Data Analysis, Business Analytics, Database.
- **Bachelor of Commerce** [University Of Lucknow](#) **Lucknow, IN** 2020-2023
Relevant Courses: Statistics, Financial Accounting, Entrepreneurship, Business Environment, Business Organization.

Projects

EV Market Analysis Dashboard – Atliq Motors

- Processed and analyzed 1.5M+ EV sales records using SQL to extract trends across 28 Indian states and 50+ manufacturers.
- Developed a Power BI dashboard with 15+ visuals to showcase KPIs like penetration rate, CAGR, and sales seasonality.
- Executed 20+ complex SQL queries to answer business-critical questions such as top-performing states, quarterly sales trends, and state-wise market saturation.

Orders Report

- The Orders Report on Power BI provided actionable insights for the sales and marketing teams, leading to targeted promotional campaigns and product recommendations.
- Improved decision-making processes by identifying top-performing products, high-value customer segments, and geographical sales opportunities.
- Enhanced data-driven strategies for inventory management, pricing optimization, and customer retention initiatives.

Road Accident Analysis

- Developed an interactive Excel dashboard to visualize KPIs, including total casualties, accident severity, vehicle types, and road conditions.
- Conducted an in-depth analysis of 3.07 million road accident records to uncover trends in casualty rates, accident severity, and contributing factors.
- This project showcases expertise in data visualization, Excel analysis, and dashboard creation tailored to stakeholder needs in public safety and transportation.

Automatic Vehicle Number Plate Detection

- Developed an Automatic Vehicle Number Plate Detection System using YOLOv5 for real-time plate detection and EasyOCR for character recognition, with a MongoDB backend for data storage, and deployed on AWS for scalability, supporting application of traffic law enforcement.
- In this project, I was responsible for managing the database and establishing backend connections to ensure efficient data storage and retrieval. Leveraging MongoDB, I designed and implemented a system to store vehicle information, including timestamps and recognized number plate data. I also optimized the database connection for real-time performance, allowing seamless integration between the frontend and backend, which is deployed on AWS for scalability and reliability.

Courses & Certifications

- Data Science (Growingseedtech)
- Introduction to Data Analytics (Coursera)
- Power Bi (Simpilearn)
- Python (Coursera)

Skills

- **Programming Language:** Python
- **Tools:** Microsoft Excel, Power Bi, Tableau, MySQL
- **Soft Skills:** Creative, Problem-Solving, Teamwork, Active Listening, Adaptability, Analytical Thinking
